

# Release note

---

## DocOut 9

Version: S82 068.010, August 26. 2020

### New features

- 64 bit application
- Each logical printer run in it's own process
- Logical printers can be individually started/stopped/restarted without affecting remaining DocOut printers
- Each logical printer process can theoretically allocate up to 2TB memory
- Support for log tracing of individual logical printers.
- Support for license server discontinued

### How to update

Updating from DocOut 8 to DocOut 9 requires a new license key. Please contact [MPI Tech Support](#) to get help with the upgrade. Customers with maintenance can upgrade for free.
